Dear Sir

Here is a Patent Search for Matrix plus  
Fortran and Matrix

It was done by Richard L. Miller  
and he thought that the matrix  
had some benefit point in its fabric  
~~and~~ the Patent # he refers to are enclosed  
I did not include a drawing of the matrix  
because as allowed under Patent Rules  
a description of the matrix served  
a better purpose;  
A large point is that to get caught up in  
the hardware of the matrix; because we  
thought of existing Technologies and hardware  
shows that the machinery is available.

BEST AVAILABLE COPY

It has not been stated before that the matrix is actually computer software; although I personally ~~am~~ am not familiar with how to program others do have the knowledge and capability to do the mechanics of programming and the filing I believe has the desiring to create the matrix.

Patent # 2003/0078829 A1 —

does have the title that most close resembles the matrix it was filed 2001.

I must say that if the Patent was floated it would bring a flurry of filing that is to say that extensively some have come by the mechanics of the matrix

and would remove the <sup>so</sup> Report<sup>so</sup> from my  
hand, which which "they" did to on Alton  
and Betty starts who live in the apt.  
Complex I live in.

~~this is~~

I only note this because of the obvious  
Confusion it causes. ~~to~~

Patent # 6330 546 B1

Is the use of the matrix

And was filed Oct 5, 1998

if the date our lap is previous patent  
60/128, 708 which actually does not not the

actual filing Date along with an affidavit  
of when the device came into existence.

A note process is only made to published  
Patents not Patents Pending.

In due conclusion — 000
